

Naol Dera

Motivated and detail-oriented Software Engineering student with hands-on experience developing full-stack web applications using the MERN stack. Passionate about building scalable, user-focused solutions and continuously expanding my expertise in modern web technologies, cloud computing, and software engineering best practices. Seeking a Full-Stack Developer position where I can contribute to impactful projects, grow as a software engineer, and deliver high-quality, maintainable applications.

WORK EXPERIENCE

Oasis Infobyte

web developer Intern

July 2026-Aug 2026

- Web Developer Intern (Remote Internship Program)
- Collaborated on the development and maintenance of responsive, full-stack web applications using modern web technologies.
- Built and enhanced user interfaces with a strong focus on usability, performance, and responsive design.
- Assisted in developing RESTful APIs and integrating frontend applications with backend services and databases.
- Participated in debugging, testing, and optimizing applications to improve functionality and user experience.
- Used Git and GitHub for version control, code collaboration, and project management.
- Worked in an Agile development environment, contributing to feature implementation and continuous project improvements.
- Applied software engineering best practices, including clean code principles, modular architecture, and effective problem-solving.
- Strengthened technical and professional skills through remote collaboration, task management, and timely project delivery.

EDUCATION

Jimma University

Bachelor Degree in Software Engineering

2024-2028

- Education
- Pursuing a Bachelor's degree in Software Engineering with a strong focus on software design, web technologies, databases, algorithms, and software engineering principles.
- Continuously expanding my technical expertise through self-directed learning and professional online courses.
- Professional Development & Continuous Learning
- Actively enhancing my skills through online courses, official documentation, and hands-on projects in the following areas:
- Full-Stack Web Development (MERN Stack)
- Advanced Full-Stack Application Development
- Cloud Computing (AWS)
- Cybersecurity Fundamentals
- Generative AI and Large Language Models (LLMs)
- Machine Learning Fundamentals
- RESTful API Design and Development
- DevOps Fundamentals (Docker, CI/CD, Deployment, and Cloud Platforms)
- Git, GitHub, and Modern Software Development Workflows

- Committed to continuous learning by building real-world projects and staying up to date with modern software engineering practices and emerging technologies

PROJECT

MERN Stack Pizza Delivery Platform (Internship Project) 2026

- Designed and developed a fully responsive, full-stack Pizza Delivery web application using the MERN stack. Implemented core features including authentication, product management, cart functionality, order processing, and a modern user interface. The project is fully functional and is currently undergoing continuous enhancement and feature refinement to achieve production-quality standards.

E-Commerce Platform for Hirmata-Mentina Region 2026

- Designed and developed a full-stack e-commerce platform to address the lack of a digital marketplace for businesses and residents in the Hirmata-Mentina region near Jimma University. The application enables buyers and sellers to connect through an accessible online marketplace with features such as user authentication, product management, search, and order processing. The system is fully functional and is currently being enhanced with additional features, performance improvements, and refinements to prepare it for production deployment.

Multi-Tenant Healthcare Appointment System(In progress) 2026

- Currently developing a scalable multi-tenant healthcare management platform that enables multiple healthcare providers to independently manage appointments, patient records, scheduling, and administrative operations within a shared architecture.

Multi-Tenant Bus Ticket Marketplace (In Progress) 2026

- Currently building a scalable multi-tenant bus ticket booking and marketplace platform that allows multiple transport companies to manage routes, schedules, bookings, payments, and customer interactions through a unified system while maintaining isolated business operations.

SKILLS

- Frontend(HTML,CSS,Javascript,React,tailwind CSS,responsive design)
- Backend(Node.js+Express.js)
- Database(MySQL,MongoDB,PostgreSQL)
- Programming Languages(Java,C++,Python)
